

Vamshi Krishna Durganala

Charlotte, NC | vamshi.durganala2000@gmail.com | (980)-613-7558

Professional Summary

- Software Developer with professional experience developing, enhancing, testing, deploying, and supporting enterprise applications using Java, Spring Boot, microservices, React/Angular, relational databases, and AWS cloud technologies.
- Strong hands-on backend development experience with Java 11/17, Spring Boot, Spring MVC, Spring Security, REST APIs, Spring Data JPA/Hibernate, SQL, and distributed microservice applications.
- Experienced in developing RESTful APIs, service-to-service integrations, event-driven workflows using Apache Kafka, scheduled processing, caching, and data-intensive backend functionality.
- Experienced in developing enterprise frontend applications using React, Angular, TypeScript, JavaScript, Material UI, and modern state-management patterns integrated with Spring Boot backend services.
- Experienced in database development and data-access optimization using SQL Server, Oracle, Spring Data JPA/Hibernate, JDBC, SQL/JPQL queries, joins, indexing, pagination, transactional processing, and Redis caching.
- Hands-on experience with application security using Spring Security, Keycloak, JWT, OAuth 2.0, MFA, and role-based access control, along with automated testing using JUnit, Mockito, Selenium, Jest, and related testing tools.
- Experienced with AWS, Docker, Kubernetes/EKS, Jenkins, SonarQube, and ArgoCD for CI/CD, application deployment, monitoring, troubleshooting, and production support in Agile development environments.
- Experienced collaborating with engineering, QA, DevOps, product, and architecture teams on technical design discussions, code reviews, testing, defect resolution, deployments, and production support, with exposure to AI-assisted development using GitHub Copilot and Claude Code.

Technical Skills

- **Programming Languages:** Java, Python, JavaScript (ES6+), TypeScript
- **Backend & Frameworks:** Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JDBC, REST APIs, Microservices, Apache Kafka, Resilience4j, OpenAPI/Swagger, Quartz Scheduler
- **Frontend Technologies:** React, Angular, Material UI, Zustand, React Hook Form, TanStack Query, HTML5, CSS3
- **Databases & Storage:** SQL Server, PostgreSQL, MySQL, Oracle, MongoDB, Redis
- **Cloud & DevOps:** AWS (EKS, EC2, ECR, RDS, Lambda, S3, IAM, API Gateway, Secrets Manager, VPC), Docker, Kubernetes, ArgoCD, Jenkins, CI/CD
- **Monitoring & Observability:** Prometheus, Grafana, OpenSearch, Splunk, AWS CloudWatch, SLF4J, Logback, MDC
- **Security & Authentication:** Spring Security, Keycloak, JWT, OAuth 2.0, MFA, RBAC
- **Testing & Quality:** JUnit, Mockito, JMeter, Selenium, Cucumber, Jest, React Testing Library, SonarQube
- **Tools:** Git, GitHub, Bitbucket, Maven, Nexus, Liquibase, Postman, Jira, IntelliJ IDEA, Visual Studio Code, Linux, GitHub Copilot, Claude Code

Work Experience

Full Stack Developer | TGS Technology LLC, Charlotte, NC

July 2024 – Present

- Developed and supported an enterprise Election Management System consisting of 14+ microservices using Java 17 and Spring Boot, implementing backend and full-stack functionality across complex business workflows.
- Designed and implemented RESTful APIs and service-to-service integrations using Spring Boot, Spring MVC, Spring Data JPA/Hibernate, DTOs, validation, and OpenAPI/Swagger.
- Built transactional data-access functionality using Spring Data JPA, Hibernate, SQL Server, and Liquibase, implementing SQL/JPQL queries, joins, pagination, entity relationships, and Redis caching.
- Implemented Apache Kafka producers and consumers for asynchronous workflows, supporting event-driven service communication, portal updates, and notification processing.
- Secured application workflows using Spring Security, Keycloak, JWT, OAuth 2.0, MFA, and RBAC, supporting authentication, authorization, token validation, and access to protected resources.
- Built full-stack features using React, TypeScript, Material UI, Zustand, React Hook Form, TanStack Query, and Axios, integrating reusable UI components and complex forms with Spring Boot REST APIs.
- Created automated tests using JUnit, Mockito, Jest, and React Testing Library and performed API and performance testing using Postman and JMeter to validate application functionality, reliability, and performance.
- Supported containerized application deployments and production troubleshooting on AWS using Docker, Kubernetes/EKS, and ECR, contributed to CI/CD pipelines using Bitbucket, Jenkins, SonarQube, and ArgoCD, participated in code reviews, and used GitHub Copilot and Claude Code for AI-assisted development, debugging, refactoring, and test generation.

Programmer Analyst | Cognizant Technology Solutions, Tamil Nadu, India

Apr 2021 – Dec 2022

- Developed and supported an internal engineering platform for Telstra using Java 11, Spring Boot, React, TypeScript, Oracle, and REST APIs, and used Python scripts to automate recurring operational tasks supporting test automation, reporting, application monitoring, and infrastructure operations.
- Built backend services using Java 11, Spring Boot, Spring MVC, Spring Data JPA/Hibernate, and REST APIs, implementing business logic, validation, exception handling, data processing, and integrations across application modules.
- Created interactive React and TypeScript dashboards with role-based views, status tables, charts, historical trends, and test execution updates, enabling engineering teams to monitor automated test runs and application status.

- Implemented data-access and reporting functionality using Oracle, Spring Data JPA/Hibernate, and SQL, including queries, joins, indexing, pagination, and transactional operations for dashboard and reporting requirements.
- Secured application features, dashboards, and data using Spring Security and role-based access control (RBAC), restricting functionality based on authorized user roles.
- Created automated tests using JUnit, Mockito, Selenium, Cucumber, and Jest, validated REST APIs using Postman and Swagger, and collaborated with QA engineers to investigate regression and application issues.
- Supported application builds and deployments using Docker, AWS, Kubernetes, Bitbucket, Jenkins, and SonarQube, and used Splunk and AWS CloudWatch for application monitoring and production troubleshooting.

Programmer Analyst | RK Info Systems, Hyderabad, India

May 2020 – Apr 2021

- Developed and maintained enterprise web applications using Java, Spring Boot, Spring MVC, and REST APIs, implementing backend business logic, request validation, exception handling, and application enhancements across functional modules.
- Implemented data-access and transactional functionality using Hibernate, JDBC, and SQL, including entity mappings, CRUD operations, joins, data retrieval, and multi-step database operations.
- Contributed to the modernization of 15+ legacy JSP-based forms into reusable Angular components using TypeScript, JavaScript, HTML5, and CSS3, integrating frontend functionality with Spring Boot REST APIs while preserving existing business functionality.
- Created JUnit tests and investigated defects across Java services, REST APIs, database operations, and frontend integrations, collaborating with QA and development team members on code reviews, testing, defect resolution, and release support.

Certifications

- AWS Certified Solutions Architect – Associate
- Microsoft Azure Fundamentals: AZ-900
- Programming, Data Structures and Algorithms: NPTEL

Education

Master of Science, Information Technology

Jan 2023 – May 2024

University of North Carolina at Charlotte, NC

Bachelor of Technology, Electronics & Communication Engineering

August 2017 – July 2021

JNTU, Hyderabad, India
